

FEATHEREDGE AND MONITOR MODULE

FEATHEREDGE

R/N: BEP100N

Benefits

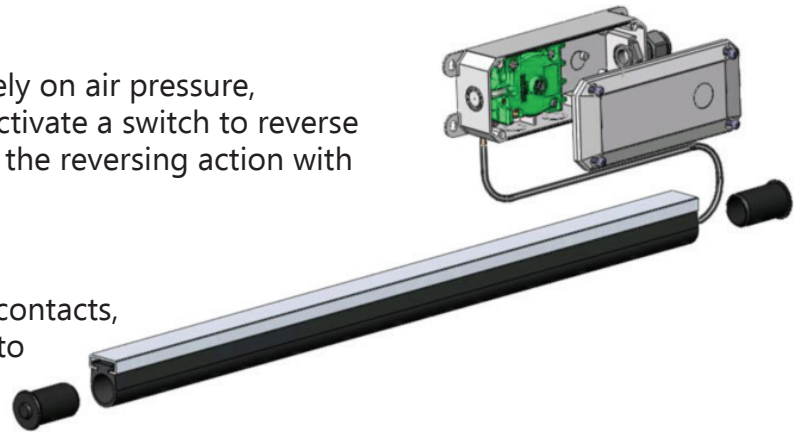

More sensitive. Featheredge does not rely on air pressure, electrical contact, or volumes of air to activate a switch to reverse the door. Air wave technology activates the reversing action with minimal impact.

Reliable Contact Operation

Because there are no internal electrical contacts, it is impossible for corrosion or tearing to render the Featheredge inoperable.

Not Affected By Punctures Or Tears

Small punctures or tears, which so often occur in traditional safety edges, will not inhibit dependable operation of the Featheredge.

WIRELESS OPTION

P/N: DWRS-200 (RECEIVER, TRANSMITTER & SWITCH)

The receiver allows the Featheredge to be installed without a coil cord.

OPTIONAL MONITOR MODULE

P/N: FEM

Fail-Safe Reliability

The Featheredge monitor tests the safety edge every cycle. If the device is not completely functional, or the wireless battery runs out, the fail-safe feature indicates a problem by requiring constant pressure on the close button to close the door.

Compatible with most operators.

Available as an option with SDI rolling, sectional and fabric doors.
